

CADe River S1

The Perfect Foundation For Your River

Cabinet Assembly Instructions

Tools required for installation

- Cordless Drill.
- Phillips head screw driver / drill bit
- Drill bit (2.5mm)

Step 1. Preparing for assembly.

- Open the box and lay the front panel onto the cardboard / foam packaging.

Step 2. Installing transverse bars.

- Insert the 4 transverse bars into position.
- The top bars contain a foam covering which must face up.
- Insert the bottom bars ensuring that the base plate supports line up correctly.
- Fix each bar using 1x screw in each predrilled hole.

Step 3. Installing rear of cabinet.

- Install the rear panel onto the transverse bars and secure with the screws provided.

Step 4. Installing cross supports.

Note: This step does not apply to CB600-1

- Install cross beam supports.
- A hole will be predrilled in both the cabinet and the support under the foam. Peel back the foam to reveal the hole. Use a screw supplied to fix the support/s in place.

Step 5. Installing the glass side panels.

Note: Take extra care with the glass side panels as they are **safety glass** which will shatter into small pieces if it is hit on an edge or corner. .

- Place the cabinet on its side.
- Lay the side panel in position and insert the black rubber spacers inside the hole from underneath. These act as a cushion between the frame and the glass.
- Place glass in position and drill the glass support holes (x4) as shown.

- Fix the side panel with the clear washer, brass threaded washer and fixing screw as shown.
- Screw the caps to brass threaded washer.
- Repeat this process on the opposite side.

Step 6. Installing internal glass shelf.

- Install internal glass shelves with the glossy side facing upwards.
- For CB900-1 and up, install the plastic strip to fill the space between the glass shelves.

Step 7. Installing tool holder.

- The tool holder mounts to the right side door. A hole is pre-drilled into the door, simply screw it in place.

Step 8. Levelling your cabinet.

- CADE cabinets are equipped with adjustable feet which is useful for uneven or un-level surfaces.
- Place the cabinet in its position with tank installed use a spirit level to check for levelling. If required adjust the feet to achieve
- Inspect to ensure that the tank is resting on the foam evenly. If not then this is a sign that the
-

Congratulations, assembly is now complete.
